(#31-40) Read the following passages and choose the one best answer for each question. (3 points for each question)

Question 31 is based on the following passage.

In 2006, an ancient Egyptian statue of the queen Nefertiti was electronically scanned, revealing that _____**(A)**_____. Based on prior research, experts were already aware that the bust consisted of a limestone core covered in stucco. They assumed that the sculptor had used the core as a mere scaffold for the stucco layers, which had been carefully shaped to depict the queen. Thanks to the 3D scans, the researchers were able to put this assumption to the test. They found that the core was not simply a mold to support the stucco layers but was actually a skillful sculpture in its own right. Although the representation is not as finely crafted as the one that is visible to the naked eye, it still contains impressive details, including creases around Nefertiti's mouth and a small bump on her nose.

31. Which of the following is most appropriate for blank **(A)**?
(1) a mysterious object was contained inside
(2) the sculptor had misrepresented his subject
(3) a layer of stucco held the sculpture together
(4) the statue's core was far more than just a mold

Question 32 is based on the following passage.

More and more studies suggest that bringing pets to work can help reduce stress and increase performance among employees. Many employees also report feeling happier working in pet-friendly offices. However, currently fewer than 10% of American companies allow pets in the workplace. In some cases, companies are restricted by the landlords from whom they lease office space, but in other cases, companies simply view the animals as a distraction. Perhaps as study results become more widely known and accepted, companies will start _____**(A)**_____.

32. Which of the following is most appropriate for blank **(A)**?
(1) encouraging more pet adoptions
(2) allowing customers to bring pets
(3) marketing new products to pet owners
(4) rethinking their stance on pets at work

Questions 33-36 are based on the following passage.

In 1963, US Navy pilot Eugene Cernan was selected by NASA to join Astronaut Group 3, the third group of astronauts to take part in the Gemini and Apollo space missions. He was able to apply to the program thanks to recent changes to NASA regulations. These changes made pilots with military jet fighter aircraft experience eligible to serve, whereas formerly only those with test pilot backgrounds were deemed qualified. Due to his **immaculate** record with the US Navy, Cernan was encouraged to apply to the program, and NASA eventually chose him as one of the 14 members of the select group.

During his 13 years in the space program, Cernan made many notable contributions. He served as a crew member or a backup crew member on a total of six missions. He made a total of three trips into space, including participating in two lunar missions, the earliest being a mission to orbit the moon in preparation for the first moon landing, which took place two months later.

However, Cernan is perhaps most widely remembered today as the _____**(A)**_____. As part of the Apollo 17 mission, Cernan and another astronaut, Harrison Schmitt, descended to the moon's surface in a lunar module named *Challenger*. There, they jointly conducted three moonwalks, during which they collected geological samples. When they returned to the lunar module, Schmitt was the first to ascend the stairs, leaving Cernan momentarily alone on the moon. As Apollo 17 was NASA's final landing mission, no one since Cernan has set foot on the moon's surface.

33. What can be inferred about Eugene Cernan?
(1) He did not have a background as a test pilot.
(2) He was not originally supposed to crew the Apollo 17 mission.
(3) He served as a backup crew member after his moon landing.
(4) He was reluctant to apply to the space program.

34. How many times did Eugene Cernan travel into space?
(1) 1 (2) 2
(3) 3 (4) 6

Questions 37-40 are based on the following passage.

Greek fire was an ancient incendiary weapon developed by the Byzantines circa AD 672. It consisted of a highly flammable substance, possibly based on naphtha and quicklime, and was generally discharged at enemy ships. It became renowned for continuing to burn even after falling to the ocean's surface, a **property** that made it highly feared by opposing naval forces.

The advent of Greek fire came at an opportune moment for the Byzantines, as they had been debilitated by constant strife with the Sasanian Empire. Because of its potency, Greek fire proved instrumental in several key naval battles. **(A)**, it helped to thwart two major sieges of Constantinople, thereby ensuring the survival of the Byzantine Empire.

Greek fire soon captured the imagination of other empires and peoples, who began to create their own versions. However, these other incendiary weapons were distinct from the original Greek fire, since outsiders could only venture guesses as to how the Byzantines had manufactured their deadly weapon.

37. According to the passage, what contributed to making Greek fire famous?
(1) It was used to devastating effect against the Byzantine Empire.
(2) It was not always extinguished after coming into contact with water.
(3) It facilitated the conquest of Constantinople on two separate occasions.
(4) It could be launched at enemy ships from under the ocean's surface.

38. Which of the following is closest in meaning to the underlined word **property**?
(1) possession (2) attribute
(3) condition (4) advantage

39. What can be inferred about Greek fire?
(1) Its original formula was a carefully guarded secret.
(2) It was extinguished more easily than other incendiary substances.
(3) It tended to be used by naval forces against land-based forces.
(4) Its unpredictability made it particularly dangerous to use.

40. Which of the following is most appropriate for blank **(A)**?
(1) Therefore (2) Granted
(3) In particular (4) By contrast
